Dear Nicolas,

Thank you for your patience while our Executive Resolution team conducted a thorough investigation into your bootloader unlocking request. We understand your frustration regarding the technical loop you have experienced between the manufacturer and our network firmware settings.

Our specialized investigation into your Motorola Moto G Play 2024 (IMEI ending in 0475) confirmed that the device is subject to our updated device unlocking policy. For all branded devices activated on our network on or after January 20, 2026, the internal device firmware remains structurally locked until the device completes a mandatory 365 days of active, paid service.

Our system records show that your device was activated on February 10, 2026, and accumulated 60 days of paid service prior to your telephone number being successfully ported out to Verizon Wireless on May 14, 2026. Because the account has been deactivated via port-out before fulfilling the required 365-day service window, the device is permanently short by 305 paid service days and is structurally ineligible for a firmware release.

The execution loop you encountered when entering the cryptographic key is the intended security behavior of the device's secure boot partitions when a modification is attempted on a carrier-locked unit. Thus, Straight Talk Wireless is unable to provide a technical manual override or an unrestricted replacement device.

Is this device you wanted to unlock? Please confirm.

We attempted to contact you on May 27, 2026, at 4:25 PM EST via your contact number ([REDACTED]) to discuss these findings; however, our call was routed to voicemail.

If you have any further questions regarding this policy, please simply reply to this email. Alternatively, you may reach our specialized team directly at 1-888-251-8169 (PIN: [REDACTED]0). Our hours of operation are Monday through Sunday, 9:00 AM to 7:00 PM EST.

Thank you for your time, and we appreciate your understanding.

Sincerely,

Executive Resolution Department
Straight Talk Wireless

To: "fccassist@tracfone.com" <fccassist@tracfone.com>

To the Executive Resolution Department:

Thank you for the prompt response.

I am writing to formally correct several factual inaccuracies in your correspondence dated May 27, 2026. The investigation you conducted reviewed the incorrect hardware and applied an irrelevant policy to my request.

Please review the following corrections to ensure the FCC record is accurate:

- 1. Incorrect Device Audited:** Your email references an IMEI ending in 0475 and identifies it as a Motorola Moto G Play 2024. That IMEI actually belongs to a Motorola Moto G 2025, which was recently active on the ported line but is not the subject of this federal complaint.
- 2. The Correct Device:** My FCC complaint specifically concerns a Motorola Moto G Play 2024 with the IMEI [REDACTED]3198.
- 3. Irrelevant Carrier Status Policy:** The subject device (IMEI [REDACTED]3198) is *already* carrier-unlocked. Therefore, the 365-day active service policy you cited regarding network/SIM locks is entirely inapplicable to this hardware.
- 4. Nature of the Technical Request:** My complaint does not request a SIM or network unlock, nor am I asking you to generate an OEM key. I already possess the valid Bootloader Unlock Cryptographic Key from Motorola. I am formally requesting that Straight Talk remove the secondary firmware restriction that is causing the execution loop, or provide an unrestricted replacement device, as this hardware has already met your network unlock requirements.

It appears your system automatically pulled the most recent device attached to the ported line rather than reviewing the specific hardware details and photographic evidence provided in my formal complaint.

I request that you reopen this investigation using the correct IMEI ([REDACTED]3198) and provide a valid, technical justification for maintaining a secondary firmware restriction on a device that is already carrier-unlocked.

Please provide a corrected response so that the FCC has an accurate record of TracFone's policy regarding OEM bootloader access on fully unlocked devices.

Sincerely,

Nicolas Hernandez

Dear Nicolas,

Thank you for your patience while our Executive Resolution team conducted a thorough re-investigation into your bootloader unlocking request. We appreciate you providing the correct hardware information so we could ensure your account records are completely accurate.

Our specialized investigation into your Motorola Moto G Play 2024 with the IMEI ending in 3198 confirms that this specific device has fully satisfied our legacy carrier compliance thresholds. Our system records verify that under the legacy Verizon 60-Day Lock Policy tied to your January 6, 2026 activation, the device successfully completed its network tenure. On March 6, 2026, under Ticket ID: 1338984705, an administrative override was successfully completed, permanently rendering the device Network Unlocked. There are zero active cellular operator locks or SIM constraints applied to this device by our network.

Regarding your request to remove the firmware restriction causing the fast boot execution loop: Straight Talk Wireless distributes retail hardware utilizing standard carrier software profiles provided directly by the Original Equipment Manufacturer (OEM). On these branded models, the core secure-boot partitions are systematically locked from the factory by the manufacturer to preserve system integrity.

According to Section III, Clause 13 of the binding Straight Talk Terms and Conditions of Service, consumers explicitly agree "not to unlock, root, re-flash, jailbreak, tamper with or alter the build state of your Straight Talk phone." Because this partition restriction is compiled into the physical hardware's operating system built at the factory level, Straight Talk Wireless does not possess custom firmware modifications, backend whitelists, or engineering mechanisms capable of overriding or rewriting these localized OEM security boundaries.

Thus, because your device has already been granted a complete and permanent cellular network release, Straight Talk Wireless is unable to authorize an alternative hardware replacement or implement a technical firmware modification.

We attempted to contact you today, May 30, 2026, at 2:46 PM EST via your contact number ([REDACTED]) to discuss these findings; however, our call was routed to voicemail.

If you have any further questions regarding this policy, please simply reply to this email. Otherwise, you may reach our specialized team directly at 1-888-251-8169 (PIN: [REDACTED]0). Our hours of operation are Monday through Sunday, 9:00 AM to 7:00 PM EST.

Thank you for your time, and we appreciate your understanding.

Sincerely,

Samuel

To: "fccassist@tracfone.com" <fccassist@tracfone.com>

To Samuel and the Executive Resolution Department,

Thank you for confirming the correct hardware details and verifying that this Motorola Moto G Play 2024 (IMEI ending in 3198) is permanently Network Unlocked under Ticket ID: 1338984705.

I am writing to formally reject the carrier's final position dated May 31, 2026. Your technical and policy justifications for maintaining a secondary firmware restriction on this fully owned hardware are invalid for the following reasons:

1. Misapplication of Terms of Service Constraints: You cite Section III, Clause 13 of the Terms and Conditions of Service to restrict bootloader modifications. However, because this device has fully satisfied its network tenure and is entirely paid off, utilizing an OEM-sanctioned utility (Motorola's official bootloader unlock program) to modify user-owned hardware does not interfere with active service delivery or network integrity. Relying on service terms to indefinitely restrict core hardware access on fully owned devices constitutes an anti-consumer lock-in strategy.
2. Contradictory Software Profile Responsibility: You assert that this secure-boot partition restriction is compiled entirely at the factory level by the Original Equipment Manufacturer (OEM) and that Straight Talk lacks the engineering mechanisms to override it. However, the OEM explicitly provides valid cryptographic unlock keys for this model, noting that the execution loop is triggered specifically by carrier-customized software profiles requested by TracFone. The carrier cannot divest itself of responsibility for restrictions built into its own custom software distributions.
3. Notice of Intent to Escalate: If the carrier refuses to coordinate a technical resolution with the OEM to clear this carrier-enforced loop, I will decline administrative closure of this file and formally escalate this matter by filing a Formal FCC Complaint and initiating a Mandatory Arbitration Notice of Dispute under Section II of the carrier's agreement, forcing a formal legal accounting of these proprietary firmware restrictions.

Desired Outcome:

I require TracFone to coordinate with the OEM to clear the carrier-side firmware profile blocking the secure boot partition, or provide an unrestricted hardware variant. Please ensure this entire correspondence is appended to FCC Case File 8711384.

Sincerely,

Nicolas Hernandez

To: [REDACTED]@gmail.com

Dear Nicolas,

Thank you for your follow-up correspondence dated May 31, 2026. We have thoroughly reviewed your points regarding the software profile and the application of our service terms to fully unlocked hardware. We apologize for the inconvenience.

Straight Talk Wireless has established its final operational and technical position regarding this matter:

Regulatory and Cellular Compliance: Straight Talk Wireless's regulatory obligations extend strictly to carrier-level network locking. As verified by our technical logs and the Verizon Value Unlocking Evaluation Tool, your Motorola Moto G Play 2024 with the IMEI ending in 3198 was successfully granted a permanent network release on March 6, 2026, under Ticket ID: 1338984705. The cellular SIM slot is completely unrestricted for use on any compatible external provider.

Firmware and Operating System Architecture: Branded retail devices distributed through our channels utilize fixed software baselines pre-configured by the manufacturer. The read-only state of the core secure-boot partitions (abl/xbl) is a factory-level security design. As a Mobile Virtual Network Operator (MVNO), Straight Talk Wireless provides network service over existing infrastructure; we do not develop custom software modifications, nor do we possess the source code or technical mechanisms required to rewrite localized bootloader validation blocks. In accordance with Section III, Clause 11 of our agreement, all distributed equipment is provided strictly on an "AS IS" basis.

Binding Agreement Terms: Under Section I of the Straight Talk Terms and Conditions of Service, the provisions governing distributed equipment remain binding post-service. Section III, Clause 13 explicitly outlines restrictions against altering, rooting, or re-flashing the factory build state of branded units. Because your device is completely network-unlocked and fully operational, your request for a remote firmware rewrite or an alternative hardware replacement is denied. We acknowledge your notice of intent .

We attempted to contact you today, June 1, 2026, at 10:03 AM EST via your contact number [REDACTED] to discuss this matter; however, our call was routed to voicemail.

This response, alongside your correspondence, has been formally appended to the regulatory case file registry. Thank you for your time throughout this review process.

Sincerely,

Samuel

To: "fccassist@tracfone.com" <fccassist@tracfone.com>

Dear Samuel and the TracFone Executive Resolution Team,

I am writing to formally reject the final position stated by Straight Talk Wireless / TracFone in your correspondence dated June 1, 2026.

Please be advised that your formal response has been submitted directly to the FCC Consumer Inquiries and Complaints Center to be permanently appended to active regulatory case file Ticket No. 8711384.

Your written admission that the permanent carrier-profile lock state on my fully paid-off Moto G Play 2024 (IMEI ending in 3198) is enforced via a factory-level security design on the secure-boot partitions (abl/xbt), and that TracFone "does not possess the source code or technical mechanisms required to rewrite" it, has been flagged for the Commission.

Because TracFone has officially consented to lift all network-level restrictions but admits the hardware baseline remains structurally locked to your branded retail profile, the administrative and technical obligation to complete the unlocking process under FCC consumer protection guidelines now shifts directly to your correspondent, Motorola Mobility.

I have requested that the FCC compel Motorola to provide a software patch or an official bootloader unlock token to clear the TracFone-specific profile baseline, or jointly arrange for an unbranded hardware replacement. I will not allow this ticket to be closed while the hardware remains restricted.

Sincerely,

Nicolas Hernandez

Tue, Jun 2, 2026 at 12:22 AM

Dear FCC Consumer Inquiries and Complaints Center,

I am writing to formally submit a rebuttal to the final operational position provided by respondent Straight Talk Wireless / TracFone on June 1, 2026, under Ticket No. 8711384. I request that the Commission keep this ticket open and unresolved, as the core consumer protection issue regarding a complete device unlock remains unfulfilled.

As detailed in my original complaint, this dispute jointly names Motorola Mobility LLC alongside the network carrier. On June 1, 2026, TracFone's Executive Resolution Department issued a formal denial, yielding a critical technical admission:

Carrier Compliance Achieved: TracFone verifies that they have granted a permanent network - level SIM release for my Motorola Moto G Play 2024 (IMEI ending in 3198).

Firmware Defect / Restriction Confirmed: TracFone explicitly states that the hardware remains permanently altered and restricted by a carrier - branded software baseline pre-configured by the manufacturer. TracFone stated in writing: "The read-only state of the core secure-boot partitions (abl/xbl) is a factory-level security design...we do not develop custom software modifications, nor do we possess the source code or technical mechanisms required to rewrite localized bootloader validation blocks."

Because TracFone has relinquished its carrier-level lock, the administrative and technical barrier preventing this fully paid - off hardware from functioning as an open-market, unbranded device rests entirely on the factory software configuration authored by Motorola Mobility LLC.

While a bootloader unlock key has been obtained, the factory-locked secure-boot partitions (abl/xbl) and deep-seated carrier software baseline prevent the device from successfully clearing the TracFone configurations. A device is not truly "unlocked" under federal consumer standards if the manufacturer leaves hardcoded software profiles active that structurally degrade or restrict the hardware's capabilities post-carrier release.

Because TracFone lacks the source code to remedy this factory-level restriction, the technical obligation to fix this firmware execution failure must now be answered by Motorola.

I respectfully request that the FCC compel Motorola Mobility LLC - as a named co-respondent in this complaint - to provide a formal resolution, whether via an official software patch to clear the secure-boot blocks, or by providing an unbranded retail replacement unit.

Thank you for your continued oversight in protecting consumer hardware rights.

Respectfully submitted,

Nicolas Hernandez
